Steps:-

Step1: First, Sign up and Login to this application "https://openweathermap.org/api"
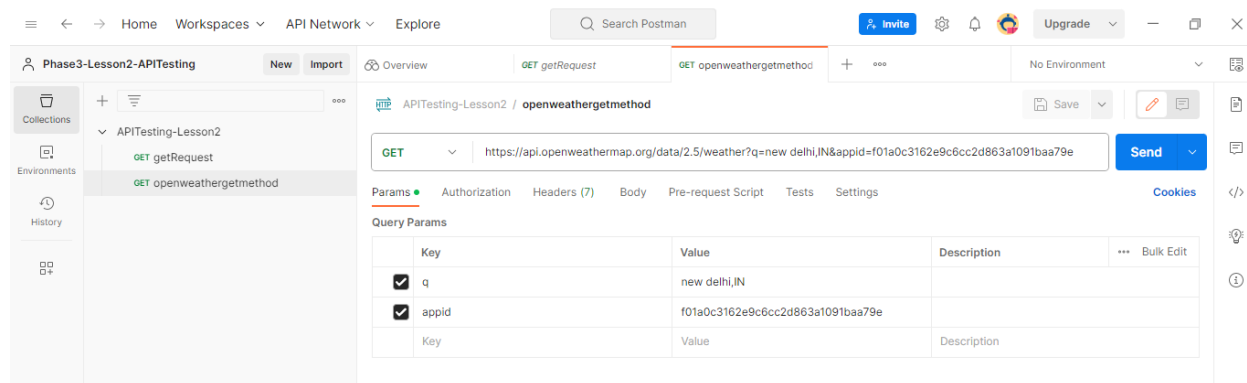

Step2: Now create API keys -> click on our account -> Click on My API keys

Step3: After clicking on My API Keys -> There will be default key generated already -> Or we can also generate our own key (Go to Create key on the same page -> Give the name to our key -> click on Generate -> Our own key will be generated)

Step4: Then, we will use below API request in Postman:

https://api.openweathermap.org/data/2.5/weather?q={any city name}&appid={Our API key}

Step5: Open Postman -> Give the details as shown below:

Step6: Save this request and click on Send to see the output of request

Step7: Now, Parameterize the requests (Add and Delete Parameters)

Step8: For this, Go to Params section of the request -> Delete q parameter and add two new parameters lat and lon as shown below:

Step9: Save this request and click on Send to see the output
